SUMMARY

Full-stack developer in 2nd year of B.Tech (Computer Engineering) with hands-on experience building and deploying web applications end-to-end. Comfortable working across the stack — from React frontends to Flask/Python backends, MySQL databases, and third-party API integrations. Eager to contribute to real-world projects and grow in a team environment.

TECHNICAL SKILLS

Languages	Python, JavaScript, C, C++, Java
Frontend	HTML, CSS, React, TypeScript, Tailwind CSS
Backend	Flask (Python), REST APIs, Google OAuth 2.0
Databases	MySQL, Oracle, PostgreSQL, Firebase
Tools & Other	Selenium (Web Scraping), Pandas, NumPy, Scikit-Learn, Git, Linux (Ubuntu)

PROJECTS

QuickLift — Peer-to-Peer Carpooling Platform

Sem 4 · 2025

Python (Flask) · MySQL · JavaScript · Leaflet.js · OSRM API · Google OAuth 2.0 · APScheduler

- Built a full-stack carpooling web app allowing users to publish and discover rides with real-time GPS tracking and dynamic fare calculation.
- Implemented dual authentication: email OTP and Google OAuth 2.0 (via Authlib), with a complete booking and passenger management system.
- Integrated automated email notifications (Flask-Mail/SMTP), live location tracking (Geolocation API + Leaflet.js), and scheduled background jobs (APScheduler).

Farmer Subsidy & Scheme Recommendation System

Sem 4 · 2025

Python (Flask) · MySQL · HTML/CSS/JavaScript · Selenium · Flask-Mail (SMTP)

- Developed a web platform for farmers to browse government subsidy schemes across machinery, seeds, cattle, and irrigation categories.
- Automated data collection by building a Selenium web scraper to extract and structure scheme details directly from official government portals.
- Designed a user-friendly interface with secure login, category filtering, and SMTP-based email notifications.

AI Emotion-Aware Tutor Chatbot with Adaptive Learning

Sem 4 · 2025

React.Js · FastAPI · PostgreSQL · Docker · SQLAlchemy · Groq LLM

- Built a full-stack AI tutoring application with emotion detection, adaptive teaching strategies, persistent chat sessions, and real-time learner insights to enhance student engagement.
- Engineered REST APIs, PostgreSQL-based session storage, and a Dockerized deployment pipeline, integrating Groq LLM for context-aware conversational responses.

Automated Credit Risk Assessment Engine

Sem 4 · 2025

Python · Pandas · NumPy · Scikit-Learn · Matplotlib · Seaborn

- Built an end-to-end ML pipeline to predict credit card approval decisions from historical applicant data, replacing manual review logic.
- Engineered features around default history, debt-to-income ratio, and employment patterns; evaluated multiple classification models for precision.

AI-Based Nutrition Tracker

Sem 2 · 2024

React · TypeScript · Tailwind CSS · PostgreSQL · Vite · Lovable Cloud

- Developed a nutrition tracking web app that calculates personalised calorie needs and tracks daily meal intake with real-time macro updates.
- Deployed on Lovable Cloud — live at nutri-bharat-tracker.lovable.app

EDUCATION

B.Tech in Computer Engineering — CGPA 7.53 (up to Sem 3)

2024 – 2026

Chandubhai S. Patel Institute of Technology (CSPIT), Charotar University, Changa

Class 12 (Science) — 87.23%

2023 – 2024

The School of Science, Rajkot · GSEB

Class 10 — 90.51%

2020 – 2021

Sunshine Educational Institute, Talala · GSEB

CERTIFICATIONS

- TATA ION – Generative ai essentials — TATA Ion
- Algorithm Design: Mastering Computational Problem Solving — Coursera
- Data Analysis with Python — Great Learning
- Core Java & C for Beginners — Great Learning
- Google Workspace (G Suite) — Google
- 50+ DSA problems solved on competitive coding platforms
